

Many groups are at high risk of getting hepatitis B, a contagious liver disease. You may be more likely to get it—and should be vaccinated—if you:

- Have diabetes, an STD, hepatitis C, HIV or AIDS
- Have been treated for substance abuse
- Have been homeless or in prison
- Are male and have sex with men
- Have unprotected sex with multiple partners

REDUCE YOUR RISK:

Get Vaccinated for Hepatitis B

Three-dose series available for minimal fee for high-risk adults at the Health Department
